Seal Coat II Squeegee Assembly Instructions

Tools Needed for Assembly

- 7/16" wrench (two)
- Phillips head screwdriver

Parts Shipped with Unit:

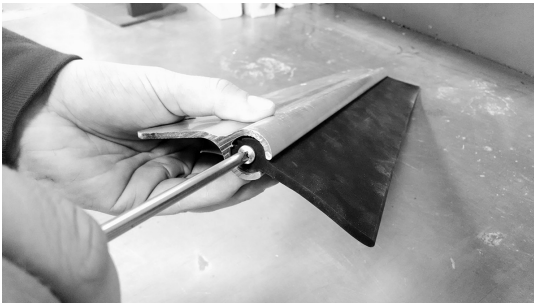

- Head
- Aluminum handle (not shown)
- Wrap-around brace (set of 2)
- Bolt bag for brace
- Seal Coat II rubber blade
- 2 Phillips head screws

Rubber Blade Installation Instructions:

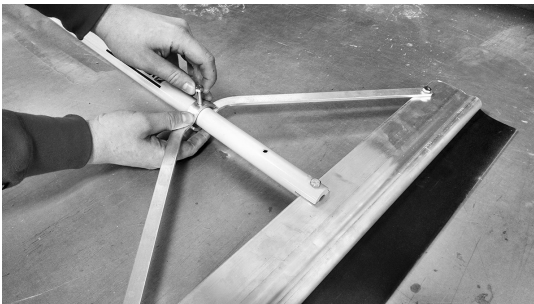

1. Slide Seal Coat II rubber blade into rounded open slot in the aluminum head. Insert until rubber blade sits flush on both sides of the rounded slot.
2. Slowly insert 1 screw into each side of the rubber blade to expand the rubber at each end and keep the blade from sliding out of the rounded slot. It may take several turns before the screw "grabs" the rubber and begins screwing into the blade.

NOTE: It is important when installing or replacing the rubber blade that it be installed straight.

Handle & Brace Assembly:

1. Slide slotted end of handle over center hole on aluminum head.
2. Align holes and insert middle size bolt.
3. Align holes of flat end of braces with holes on head, as shown, and insert the two shortest bolts and nuts (do not tighten nuts until step 5)
4. Align holes of wrap-around end of braces with the handle, as shown, and insert the longest bolt and nut.
5. Tighten all loc nuts on bolts. Use wrenches to tighten, being careful not to over tighten. Over tightening may result in crushing the handle, thereby compromising its strength.

FULL WARRANTY

All Seymour Midwest products carry a full warranty against manufacturer defects in quality and workmanship. Products which have been abused or worn out from normal use are excluded from this warranty. We reserve the right to replace or issue credit on an individual basis.
